

## Stockcross WBS

Thames Water

### Client

Thames Water

### Contractor

Eight20/Trant

### Location

Stockcross, Berkshire

### Products

Combined AT, AG covers with anti-slip & external handrails

### Dimensions

7880 mm x 2200 mm 

## Overview

Eight20 / Trant were looking to increase the chamber height by approx. 900 mm to allow operatives to stand inside the existing buried chamber without the risk of injury enabling safer working practices.

## Project Summary

The requirement was for two new internal ladders combined with access points to SR3 security installed on top of a multiple upstanding cover.

EJ designed a multiple cover to suit the chamber made up of drop in padlockable sections. Eight20 / Trant requested two access points on top of the chamber. EJ provided 2 new ladder systems complete with hinged assisted covers and fall protection.

Installation was safely carried out over a three week period under full traffic management and restricted working hours.
